

Meeting summary

Quick recap

Bean and Christine met to review Christine's website project progress. Bean provided positive feedback on the overall design, including the banner, buttons, and font selection, but noted that some text and button sizes were too small and needed adjustment. They discussed implementing animations for buttons and hover states, with Bean offering to share CSS examples from a previous project. They also reviewed plans for the Explorer page, where Bean offered to provide player information data. The conversation concluded with a discussion about navigation features, deciding to remove the side navbar for mobile responsiveness, and clarification about categories for the homepage slideshow, which Christine could modify as needed.

Next steps

- Bean: Send information for 5 different players to Christine for the Explorer page.
- Christine: Update font sizes, especially for main text and top nav bar buttons, as discussed.
- Christine: Implement hover and animation effects for buttons and relevant UI elements, inspired by Figma example.
- Christine: Consider adding or removing the side navbar/heading navigation based on implementation feasibility and mobile responsiveness.
- Christine: Review and potentially update homepage/show categories, adding or changing as needed, possibly using ChatGPT for ideas.

Summary

Website Design Review Meeting

Bean and Christine met to review a website design. Bean expressed satisfaction with the overall look, including the banner, buttons, and font. Christine explained that images on the site were placeholder text as she had not yet uploaded actual images to GitHub.

Website Design Feedback Review

Bean and Christine reviewed the website design, with Bean providing feedback on font sizes being too small for the main text and top navigation buttons. Bean approved the layout for the Explorer page and offered to share information about five different players for Christine to incorporate, suggesting that specific players be highlighted while others are darkened for distinction.

Page Animation Implementation Discussion

Christine and Bean discussed adding animations to the page, particularly focusing on button styles and hover states. Christine expressed interest in implementing bubbly button animations similar to what was seen on the Figma design. Bean noted that many animations would be reusable across the site once implemented in CSS. The conversation ended mid-sentence as Bean was about to discuss a side element from the original mockup.

Web Navigation Feature Implementation Discussion

Christine and Bean discussed the implementation of a navigation feature on a webpage. Bean expressed a preference for incorporating a jump-to-heading functionality if it wasn't too difficult to implement, but suggested removing it on smaller screens like phones where scrolling would be more intuitive. Christine confirmed she would adjust the design accordingly, removing the feature for mobile versions.

Homepage Slideshow Categories Discussion

Christine and Bean discussed categories for a slideshow on the homepage. Bean clarified that the initial four categories were not special or required, and Christine could add more or modify them as needed. They expressed surprise at the fast pace of the project moving from initial to final version in just one week, though they speculated it might include peer reviews of websites in the final week.
